

The **RSC+ App** allows a User to connect to a Solution 2000 or Solution 3000, allows them control of the panel, and to adjust settings to allow them to receive certain Push Notifications. This is all via the Bosch Cloud and is a free service. The panel must be V2.00 or higher and must have a B426-M or B450-M and a B443 installed and configured. The **RSC + App** can be downloaded for **Android or iPhone**.

1 CREATING A PANEL

CREATE your new panel profile. Touch on the arrow head (>) symbol on the screen. You will find a BLANK screen that says PANELS. Touch the **GREEN +**

2 PANEL PROFILE

You can now CREATE your panel profile. You must give it a name and then the Cloud UID. You can enter the whole number or you can scan the QR code. Click on Add. You have now created a panel profile in RSC +

3 PANEL CONNECTION

To connect to the panel you must enter the User PIN that corresponds to this User. (It can be any User from 1 to 32 that has an assigned User PIN). To be live to the panel, click **CONNECT**. When not connected to the panel under **SETTINGS**, you then specify what events will be notified to the User.

4 PUSH NOTIFICATIONS

You may specify one or all of these options. You should now be online and the app will report any events you have specified under the settings. You can now arm or disarm the system.

*Note that only User 1 can see the History when online to the system via the App.
